Reasons for Allowance

The following is an examiner's statement of reasons for allowance: None of the prior art of record teaches or suggests a method of variable hot start with all the steps as set forth in independent claim 1, a computer readable storage medium with all the features of independent claim 14, or a welding apparatus with the limitations of either one of independent claims 23 or 29. In particular, there is no teaching or suggestion in the prior art of record of the limitations directed to the two different V/A outputs or characteristics as set forth in the independent claims. Applicant's arguments in the "Remarks" section of the amendment filed on 4/9/2007 are persuasive that the claims distinguish over the Geng et al (2001/0035399) publication. In addition, it is noted that certain of the prior art documents of record disclose a welding power supply that has an output voltage/amperage characteristic curve wherein different parts of the curve have different slopes (see for example figure 9 in Geissler et al. (6,107,602), figure 3 in Sykes et al. (6,479,794), or figure 5 in Risburg (3,904,846)). The limitations in applicant's independent claims that specify two different voltage/amperage (V/A) outputs or two different V/A characteristics are considered to distinguish over the prior art showing of a single V/A output or characteristic having different portions. The dependent claims are allowable at least because they depend from allowable independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
